

(Bid #ESCNJ 18/19-32) by The Educational Services Commission of NJ (state approved co-op #65MCECCPS) for the bid term 10/19/18-10/18/20. Extended through 10/18/22.

## Disinfectant Fogging: What you need to know

**Our fogging is a 100% eco-friendly method of eliminating COVID and even the most difficult to kill germs. We fog because it reaches every surface, even where wiping misses.**

We use the latest in disinfection technology to reduce the spread of germs: bacteria, viruses, and mold and improve indoor air quality.

Fogging medically disinfects the space(s) and aids in eliminating odors and mustiness.

**Facilities Departments throughout NJ are working proactively to create and maintain healthy spaces for students and staff.**

### ELIMINATES COVID

Does the fogging leave behind dangerous chemical residues?

No. The products we use are safe, widely used, and decompose leaving no harmful residues on surfaces or in the air.

You may re-enter the room at the time posted on the placard on the door.

The placard will show the start time, plus treatment time, plus 3 hours, ending with safe re-entry time.

### EFFECTIVE

The solution is made of 7% hydrogen peroxide, leaving no harmful residues behind.

Contains no VOCs, breaks down to oxygen and water and produces no harmful, sticky by-products.

Do you remove mold?

Yes. Once the source of the mold has been fixed our experts eliminate the dangerous mold spores to keep your space safe.

### MOLD

Depending on the size (volume) of the room, the fogging cycle takes from 12 minutes to 1 hour.

Typically the process takes about 4 hours from set up to re-entry time.

### SAFE

The products we use are safe, eco-friendly, EPA approved, and validated.

In fact, these products are widely used in healthcare, EMS vehicles, schools and public transportation.

Do I need to worry about my papers or electronics?

No. The fogging will not wet or damage any papers or electronics such as printers, computers, projectors, etc.

### PROVEN

**HVAC Scheduling:** The air must be turned off 30 minutes prior to fogging and turned back on at the end of the service.

School Administrative staff must put in a schedule request.

**VIRUSES . MOLDS . BACTERIA . 6-LOG KILL RATE . NON-TOXIC . ECO-FRIENDLY . SAFE**
